

Corporate Overview & Capabilities

Who We Are

SKALE Networks™ was founded in 2011 by Jared Brank and Kit Kerbel. With over 25 years of combined experience in enterprise computing systems design and information technology security, we have dedicated our time and talents to designing and supporting next-generation solutions that make our customers more profitable through reducing their operating expenses by reducing the number of man hours required to perform certain tasks, preventing equipment failures, safety hazards, and disasters in real-time, and giving them invaluable insight into their business processes they would not otherwise have. We run our business on old-fashioned principles and know that at the end of a day the most valuable asset a company can hold is the trust and confidence of its customers. We know that only by making our customers consistently more profitable and providing quality service can we expect to grow with them – and that is our plan for long-term success.

Products & Capabilities

Oilfield & Energy Sector Monitoring & Telemetry – SKALE **MinuteMan™** Telemetry Control System

- Production Facilities – Gathering Systems, Salt Water Disposal, Tank Batteries, and Custody Transfer
- Chemical and Fuel Storage Facilities
- Automatically notify your transport company to schedule pickups or deliveries
- Monitor virtually anything – If a sensor can be put on it, **MinuteMan** can monitor it
- Drop-In Solution - MinuteMan can connect to most existing sensors out of the box

Real-Time Analysis, Reporting, and Alerting – SKALE **Infrastructure IQ™**

- Proprietary next-generation reporting and analysis platform
- Real-Time Alerting – emails, text messages, and calls your technicians when abnormal conditions are detected
- Accessible via the web on computers, mobile devices, and smartphones from anywhere in the world
- Military-grade security so your information and assets are safe

Connect to Your Assets in even the Most Remote Locations – SKALE**net™**

- Quickly deploy a ready-to-use monitoring infrastructure with minimal CAPEX and setup time compared to traditional solutions
- We have pre-negotiated contracts with global service providers that we can leverage to give you the best price and service without the need for negotiations that can take months and delay your project

Custom Applications

- We can automate, monitor, and remote control your products and provide you and your customers with real-time information regarding the operational status of products in the field via the web
- Expand your products' capabilities and get them to market more quickly by building on our proven automation platform and network
